

Public Health Reports

Treasury Department, United States Marine-Hospital Service. Published in accordance with act of Congress approved February 15, 1893.

VOL. XIII. WASHINGTON, D. C., SEPTEMBER 9, 1898. NO. 36.

UNITED STATES.

National Maritime Quarantine, Montauk Point, Long Island, N. Y.

Statement of transports which have arrived at Montauk Point (Camp Wikoff) September 1 to September 8, 1898, showing number of troops arriving thereon, number of sick, and number of yellow fever cases and deaths reported to have occurred on same.

Date.	Name of transport.	Number of troops.	Number of sick.	Remarks.
Sept. 1	Ss. Mexico.....	62	No yellow fever.

Yellow fever at Franklin, La.

Continuing report from Franklin, the total number of cases reported from the outbreak of yellow fever up to the 8th instant has been 18 with 1 death. Disinfection of infected quarters with a large force is in progress, and the main foci of the disease, 3 in number, are roped in and guarded. Officers are engaged inspecting other points inside the parish, and others are inspecting points outside, both sets of officers keeping record of all suspects and making reports of same. A detention camp was opened this week and 19 persons were admitted on the 5th instant to undergo observation before leaving the neighborhood.

Surgeon H. R. Carter, Marine-Hospital Service, having been called to Taylor, Miss., placed the management of quarantine matters at Franklin in the hands of Surgeon P. C. Kalloch, Marine-Hospital Service, who is aided by Assistant Surgeon R. H. von Ezdorf and Acting Assistant Surgeons Faget and Ahrens. A hospital steward has also been sent to Franklin.

Situation at Key West.

Quarantine at Key West was maintained until the 8th instant when it was raised by the State health officer. No new cases of suspected yellow fever had been reported during the two weeks previous. The marines, among whom the disease appeared and was confined, have been removed north, only the sick remaining in camp.

Yellow fever in Mississippi.

The suspicious cases at Orwood referred to in the last number of the PUBLIC HEALTH REPORTS have been confirmed as yellow fever. The origin of the disease has been traced to Taylor, a town on the Illinois Central Railroad, where 5 cases developed about July 20, 1898; 2 of these moved to Orwood, where 35 cases of the disease had occurred up to the 4th instant; no deaths. These cases are reported to have been mild, like those of last year on the Mississippi coast. All necessary precautions have been taken to prevent the spread of the disease, including the tracing of persons who have left the infected district after exposure.

Surgeon Carter and Passed Assistant Surgeon Cobb are cooperating with the officers of the Mississippi State board of health at Taylor and Orwood, and Passed Assistant Surgeon Stimpson is at Holly Springs in charge of train inspection on Kansas City, Memphis and Birmingham Railroad, with Acting Assistant Surgeons Frick and Landry aiding in the work. Passed Assistant Surgeon McIntosh is awaiting orders at Grand Junction. Surgeon Carter wires from Taylor, September 7, "Three new cases here; Orwood not heard from. Will finish census and house-to-house inspection here to-morrow. All visiting between houses ordered stopped. Seven houses here have, or have had fever."

Situation at Fort Point, Tex.

Passed Assistant Surgeon J. M. Eager, Marine Hospital Service, under date of September 6, states that all the suspicious cases of sickness at Fort Point previously reported have recovered; that the quarantine of the State of Texas against Galveston was raised on the 29th ultimo, while that against Fort Point is still maintained, and no other cases of sickness in which there is suspicion of yellow fever have occurred in Galveston or elsewhere in Texas.

[Reports to the Supervising Surgeon-General, United States Marine-Hospital Service.]

Transportation of dead bodies—Circular letter addressed to State health officers.

WASHINGTON, D. C., August 24, 1898.

SIR: I have to respectfully request that you will furnish this Bureau with a copy of the laws and regulations governing the admission to and

September 9, 1898

transit through your State of bodies of persons dying of contagious disease or otherwise.

An early reply is desired for the reason that many inquiries are made of this Bureau from friends of soldiers who die in Cuba and Puerto Rico, who wish the bodies returned to the United States.

Respectfully yours,

WALTER WYMAN,
Supervising Surgeon-General, U. S. M. H. S.

Abstract of replies received.

CONNECTICUT.

According to section 113 of the general statutes, a dead body is allowed transportation from or into the limits of any town in the State, provided there be attached to the coffin or case containing such body a written or printed permit certifying the cause of death or disease of which such person died and the town in which such person is to be buried, and further certifying, in case said disease is shown on the permit to have been cholera, yellow fever, membranous croup, diphtheria, typhus fever, enteric fever, scarlet fever, measles, leprosy, smallpox, or other pestilential disease, that the body is inclosed in an air-tight coffin or case hermetically sealed and that it has been disinfected in accordance with the method prescribed from time to time by the State board of health.

ILLINOIS.

Rule 1. The transportation of bodies dead of smallpox, Asiatic cholera, yellow fever, typhus fever or bubonic plague, is absolutely forbidden.

Rule 2. The bodies of those who have died of diphtheria (membranous croup), scarlet fever, glanders, anthrax, or leprosy shall not be accepted for transportation unless prepared for shipment by being thoroughly disinfected by (a) arterial and cavity injection with an approved disinfectant fluid, (b) disinfecting and stopping of all orifices with absorbent cotton, and (c) washing the body with the disinfectant, all of which must be done by an embalmer, holding a certificate as such approved by the State board of health or other State health authority. After being disinfected as above the body shall be enveloped in a layer of cotton not less than 1 inch thick, completely wrapped in a sheet and bandaged, and encased in an air-tight zinc, tin, copper, or lead-lined coffin, hermetically sealed and inclosed in a strong wooden box.

Rule 3. Bodies dead of typhoid fever or other dangerous communicable disease not mentioned in rules 1 and 2 may be received for transportation when prepared for shipment by filling cavities with an approved disinfectant, washing the exterior of the body with the same, stopping all orifices with absorbent cotton, enveloping the body with a layer of cotton not less than 1 inch thick, wrapping in a sheet, bandaging and inclosing in an air-tight coffin. This shall apply only to bodies reaching their destination within forty-eight hours. In all other cases such bodies shall be prepared for transportation in conformity with rule 2. When the body is prepared by an embalmer holding a certificate from State board of health, air-tight sealing may be dispensed with.

Rule 4. Bodies dead of diseases that are not infectious or communicable may be received for transportation when encased in a sound coffin or casket, inclosed in a strong wooden box, provided they reach their destination within thirty hours. If they can not reach their destina-

tion within thirty hours they must be prepared according to Rule 3. When prepared for shipment by an embalmer, holding competent certificate, air-tight sealing may be dispensed with.

Rule 5. In cases of contagious, infectious, or communicable diseases the body must not be accompanied by persons or articles which have been exposed to the infection of the disease, unless certified by the health officer as having been properly disinfected. Notice must be sent to the health officer, advising the date and train on which the body may be expected. This notice must be sent by or in the name of the health officer at the initial point.

Rule 6. Every dead body must be accompanied by a person in charge, who must be provided with a passage ticket and also present a full first-class ticket marked "corpse," for the transportation of the body, and a transit permit, showing physician's or coroner's certificate, health officer's permit for removal, undertaker's certificate, name of deceased, date and hour of death, age, place of burial, cause of death, and point of shipment. The transit permit must be made in duplicate with the signatures of all attesting parties. The duplicate copies shall be sent to the Secretary of the State or provincial board of health of the State or province from which the shipment was made.

Rule 7. When dead bodies are shipped by express the whole original transit permit shall be pasted upon the outside box and the duplicate forwarded by the express agent to the secretary of the State or provincial board of health of the State or province from which such shipment was made.

Rule 8. Every disinterred body dead from any disease or cause, shall be accepted for transportation only when such removal has been approved by the health authorities having jurisdiction where such body is disinterred, and all such disinterred remains shall be inclosed in a hermetically sealed (soldered) zinc, tin, or copper lined coffin.

INDIANA.

Rules relative to transportation of dead bodies same as those adopted by State of Illinois.

IOWA.

Rules relative to transportation of dead bodies same as those adopted by State of Illinois.

MICHIGAN.

Regulations relative to transportation of dead bodies substantially the same as those adopted by State of Illinois.

MISSISSIPPI.

Rules relative to transportation of dead bodies same as those adopted by State of Illinois.

NEW JERSEY.

The body of any person dead of cholera, yellow fever, typhus fever, leprosy, plague, trichinosis, smallpox, typhoid fever, diphtheria, scarlet fever, or any other contagious, infectious, or communicable disease shall be accepted for transportation only when inclosed in hermetically

September 9, 1898

sealed casket, license for such transport having been obtained from the local board of health of the municipality or township in which the death has occurred.

NEW YORK.

When application is made for a permit to transport a corpse over any railroad or upon any passenger steamboat within the State, the board of health, or the officers to whom such application is made, shall require such corpse to be inclosed in a hermetically sealed casket of metal or other indestructible material, if the cause of death shall have been from a contagious or infectious disease.

OHIO.

The transportation of bodies of persons dead of smallpox, diphtheria, membranous croup, Asiatic cholera, typhus fever, or yellow fever, except for burial or cremation within the jurisdiction of the health authorities of the municipality or township in which the death has occurred, is strictly forbidden.

The bodies of persons dead of other contagions, infections, or communicable diseases must be wrapped in a sheet thoroughly saturated with a strong solution of bichloride of mercury in the proportion of one ounce of bichloride of mercury to a gallon of water, and encased in an air-tight zinc, tin, copper, or lead lined coffin, or in an air tight iron casket, hermetically sealed, and all inclosed in a strong, tight, wooden box.

The bodies of persons dead of diseases that are not contagious, infectious, or communicable, may be received for transportation to local points in the same State when encased in a sound coffin or metallic case inclosed in a tight wooden box. But for transportation to points outside the State, unless the time required for transportation does not exceed eighteen hours, they must be encased in an air-tight coffin or casket, metal lined, hermetically sealed, and inclosed in a strong outside wooden box, provided with four iron chest handles.

Every dead body must be accompanied by a transit permit from the competent health authorities and the box containing corpse must be plainly marked with name of deceased, cause and place of death, point of shipment, and number of transit permit issued in connection therewith.

PENNSYLVANIA.

The transportation of bodies of persons who shall have died from smallpox, Asiatic cholera, typhus fever, diphtheria, or yellow fever, is strictly forbidden. From October 15 to April 1 all other dead bodies may be transported without restriction, except those which shall have died of scarlet fever, typhoid fever, or measles, which must be inclosed in air-tight zinc, copper, or lead lined wooden boxes, or in air-tight iron caskets, or if in any other form of coffin, said coffin must be in a hermetically sealed box, inclosed in a manner satisfactory to the local board of health or health officer.

Every dead body must be accompanied with a physician's certificate of death and a certificate from the shipping undertaker that the body has been prepared for transportation in accordance with the rules of the State board of health of the Commonwealth of Pennsylvania.

Transit permits will be received for bodies shipped from, beyond, or within the States of New York, New Jersey, Delaware, Maryland, West

Virginia, or Ohio, or the Province of Ontario without subjecting the body to delay, provided the rules of the State or provincial boards of health do not conflict with any of the preceding rules in these regulations.

WEST VIRGINIA.

Rules relative to transportation of dead bodies are similar to those adopted by the State of Ohio.

Interstate quarantine regulations relative to transportation of dead bodies.

Article III, paragraph 5, Interstate Quarantine Regulations, provide as follows: The body of any person who has died of a quarantinable disease shall not be transported save in hermetically sealed coffins, and by the order of the State or local health officer.

a Previously reported.

Reports of States and yearly and monthly reports of cities.

CONNECTICUT—*Westport*.—Month of August, 1898. Estimated population, 4,000. Total number of deaths, 6, including 1 from phthisis pulmonalis.

IOWA—*Burlington*.—Month of July, 1898. Estimated population, 30,000. Total number of deaths 34, including 3 from phthisis pulmonalis.

Cedar Rapids.—Month of July, 1898. Estimated population, 25,000. Total number of deaths, 17, including 4 from phthisis pulmonalis.

Council Bluffs.—Month of July, 1898. Estimated population, 21,474. Total number of deaths, 18, including 2 from phthisis pulmonalis.

Davenport.—Month of July, 1898. Estimated population, 36,000. Total number of deaths 29, including 1 from phthisis pulmonalis.

Des Moines.—Month of July, 1898. Estimated population, 82,500. Total number of deaths 49, including 4 from phthisis pulmonalis.

Dubuque.—Month of June, 1898. Estimated population, 45,000. Total number of deaths 31, including diphtheria 2, and 2 from phthisis pulmonalis.

Eldon.—Month of July, 1898. Estimated population, 1,900. Total number of deaths, 2.

Keokuk.—Month of July, 1898. Estimated population, 19,305. Total number of deaths 13, including enteric fever 1, and 3 from phthisis pulmonalis.

Muscatine.—Month of July, 1898. Estimated population, 12,237. Total number of deaths, 12, including 1 from phthisis pulmonalis.

Ottumwa.—Month of July, 1898. Estimated population, 18,000. Total number of deaths, 19, including 1 from phthisis pulmonalis.

Sibley.—Month of July, 1898. Estimated population, 1,300. One death.

Sioux City.—Month of June, 1898. Estimated population, 27,142. Total number of deaths, 11.

MICHIGAN.—Reports to the State board of health, Lansing, for the week ended August 27, 1898, from 69 observers, indicate that enteric fever and influenza increased and phthisis pulmonalis and inflammation of kidney decreased in area of prevalence. Phthisis pulmonalis was reported present at 187, enteric fever at 58, diphtheria at 19, scarlet fever at 17, measles at 14, whooping cough at 14 places and smallpox at 1 place.

NEW YORK.—Reports to the State board of health, Albany, for the month of July, 1898, from 155 cities, towns, and villages, show a total of 11,441 deaths, including diphtheria, 159; enteric fever, 89; measles, 52; scarlet fever, 59; whooping cough, 176, and 1,116 from phthisis pulmonalis.

The Monthly Bulletin says:

Following the month of almost the lowest mortality, July is always the month of largest mortality in the year; the present reported mortality is 2,800 in excess of that of the month preceding, and the death rate has risen from 16 to 20.60 per 1,000 population annually. This increase is chiefly in deaths from diarrheal diseases, from which 2,000 more deaths occurred than in June, and in deaths credited to other diseases of the digestive organs. The mortality of early life, upon which these diseases chiefly fall, was double that of June. The relative zymotic mortality is likewise doubled, but in diseases other than diarrheal there is no variation. Compared with the month of July of former years, there were 200 deaths more than in that month in 1897, which was an unusually healthy July, and the deaths occurring this month are fewer than the average of the past ten years; the diarrheal mortality is less even than last year, and the increase has been in deaths from local diseases. The infant mortality (under the age of five years) is 43 per cent of the total, being usually 50 per cent in this month; in the maritime district it was 52.3 per cent, and it is increased from last month only in districts containing the larger cities, three-fourths of these deaths occurring in the metropolis. Diarrheal diseases caused 20 per cent of the total mortality, these likewise having increased for the most part only in the larger cities, there having occurred in four districts with largest city populations 40 deaths per 100,000 population for the month, and in the other four more rural districts but 8 deaths to the same population. It is usually the case in this State that the diarrheal mortality is felt not in the early summer, but later, in August and September, among the rural population. The zymotic mortality other than diarrheal is usually at its lowest in July, the only exception being with whooping cough, which is highest in July and August, and which has thus increased to 176 from 111 deaths last month. Diphtheria caused 159 deaths, or about one-half the normal average for the month, and outside the metropolis there were only 36 deaths from it. Smallpox has occurred, one case in the town of Livonia and four or five in the town of Waverly, possibly traceable to source heretofore reported in the central part of the State; all have the mildness characteristic of other cases reported. Diseases of the digestive and nervous systems are the only local diseases which show seasonal increase. Accidental deaths, of which a few are from heat and lightning stroke, but largely from drowning, are increased.

The average temperature for the entire month was 2° below the normal, but in the early part of the month excessively hot weather occurred, the high range of 100° having been noticed, and the average highest temperature was 95°, lowest 48°; there were an unusual number of clear days and but four cloudy; the rainfall was deficient.

WISCONSIN—*Superior*.—Month of August, 1898. Estimated population, 35,000. Total number of deaths, 36.

BRAZIL.

Sanitary reports from Rio de Janeiro.

RIO DE JANEIRO, August 10, 1898.

SIR: I have the honor to transmit to you the official report for the week ended July 29. There were 271 deaths from all causes, an increase of 30 as compared with the foregoing week; 6 deaths from *acesso pernicioso*, the same as before; 13 deaths from yellow fever, the same as before; 1 death from typhoid fever, a decrease of 1; 5 deaths from beriberi, an increase of 3, and 40 deaths from tuberculosis, an increase of 15.

There occurred during the week ended August 5, 270 deaths from all causes, 3 deaths from *acesso pernicioso*, 7 deaths from yellow fever, 13 deaths from different fevers, and 2 deaths from beriberi.

The state of health at Rio de Janeiro remains more or less in the same condition as before. The scarcity of rain continues and yellow fever persists, although it shows a decrease.

Since last report the following-named ships have been inspected and received bills of health from this office: August 2, steamship *Pembridge*, British, for Port Eads; August 4, steamship *Etona*, British, for New York; bark *Louise*, Norwegian, for Mobile; steamship *Galileo*, Belgian, for New York. August 5, bark *Leonore*, Portuguese, for New Orleans; steamship *Fulwell*, British, for Galveston. August 6, ship *America*, Portuguese, for New Orleans.

Respectfully yours,

W. HAVELBURG, M. D.,
Sanitary Inspector, U. S. M. H. S.

CHINA.

*Quarantine against Hongkong.*CONSULATE-GENERAL OF THE UNITED STATES,
Shanghai, China, July 16, 1898.

SIR: Referring to my No. 62 of March 25, I have to report that the Taotai of Shanghai and the consular body have declared terminated the quarantine of vessels coming from Hongkong and Canton to this port.

I have the honor to be, sir, your obedient servant,

JOHN GOODNOW,
Consul-General.

Hon. SECRETARY OF STATE.

Plague in Hongkong.

YOKOHAMA, JAPAN, August 17, 1898.

SIR: I have the honor to forward for your information the subjoined summary statement of the occurrence and mortality of plague in Hongkong from January 1 to July 8, when it practically ceased to be epidemic. This report I have received from official sources, and it is to be relied upon.

September 9, 1898

Return of plague cases January 1, to July 8, 1898.

Europeans, 36 cases, 16 deaths; Chinese, 1,236 cases, 1,118 deaths; other races, 39 cases, 21 deaths; total, 1,311 cases, 1,155 deaths. The death rate was, therefore, 88.1 per cent.

I am, sir, very respectfully, your obedient servant,

STUART ELDRIDGE, M. D.,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

CUBA.

Sanitary reports from Santiago.

The following daily reports in regard to the sanitary condition and the mortality in Santiago are transmitted by Sanitary Inspector H. S. Caminero, United States Marine-Hospital Service:

SANTIAGO DE CUBA, August 19, 1898.

SIR: I have the honor to inform you that 44 deaths have taken place to-day, as follows: Civilians, 29; military hospital, 10; (Spanish), 4; civil hospital, American, 1. The transports continue to be inspected as carefully as possible, and although they all carry more or less cases of sickness none of these are yellow fever cases. I take great pains to locate such cases when reported, and carefully examine them, but so far I have not seen any but malarial, remittent, and bilious fevers. Of course I can not answer for any cases developed during the voyage.

August 20, 1898.—I have the honor of informing you that the mortality has again increased to-day. Sixty-five deaths have been reported as follows: Civilians, 39; military hospital, 18; civil hospital, 7; Americans, 1. The excessively high temperature prevailing at present is unmitigated by the heavy showers falling nearly every day. I believe this is the cause of the increase of the malarial fevers, which take a pernicious form and cause many deaths. Dysentery is rapidly declining, both in frequency and virulence. Diarrhea is prevailing to a great extent.

August 21, 1898.—I have the honor of informing you that 55 deaths were recorded to-day, as follows: Civilians, 38; military hospital, 13; civil hospital, 2; Americans, 2. Charles Franklyn, the American colored boy I saw with yellow fever in the civil hospital, died yesterday. I was present at the time of his death and could prove the correctness of my diagnosis. Epistaxis and large quantities of *borras* or black vomit from the stomach were the final symptoms. The body was completely saturated with carbolic acid and wrapped in sheets also wet with the acid solution and burnt. There are no other cases at present.

August 22, 1898.—I have the honor of informing you that the mortality is perceptibly decreasing—46 deaths were reported to-day, as follows: Civilians, 30; military hospital, 12; civil hospital, 4; Americans, 0. I called to-day at the military hospital and inspected the building thoroughly. There are still 1,400 sick and wounded soldiers, but no cases of yellow fever. The place seems deserted at present, and is not very clean, owing to the lack of men to do any work. About 300 will leave to-morrow by one of the Spanish transports, and the rest will be

shipped during the rest of the month. I believe the hospital will be disinfected and cleaned and used for hospital purposes.

Respectfully,

H. S. CAMINERO, M. D.,
Sanitary Inspector U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine Hospital Service.

DANISH WEST INDIES.

Quarantine established against Caracas and La Guayra, Venezuela.

DEPARTMENT OF STATE,
Washington, D. C., August 27, 1898.

SIR: I have the honor to inclose for your information a copy of a dispatch from our minister at Copenhagen, reporting that the Government of the Danish West Indies has declared a quarantine of fifteen days against Caracas and the port of La Guayra on account of an epidemic of smallpox at those places.

Respectfully yours,

J. B. MOORE,
Acting Secretary.

The Hon. SECRETARY OF THE TREASURY.

[Inclosure—Report No. 62.]

LEGATION OF THE UNITED STATES,
Copenhagen, August 13, 1898.

SIR: I have the honor to inform you that the Government of the Danish West Indies has declared a quarantine of fifteen days against Caracas and the port of La Guayra on account of an epidemic of smallpox at these places.

I have the honor to be, sir, your obedient servant,

Laurits S. SWENSON.

Hon. SECRETARY OF STATE.

JAPAN.

Report on prevalence of infectious diseases.

YOKOHAMA, JAPAN, August 17, 1898.

SIR: I have the honor to forward herewith my regular report of infectious diseases in Japan for period July 28 to August 16, inclusive.

In so doing I beg to call your attention to the increasing prevalence of epidemic dysentery, which is now general throughout Japan, with the exception of a few provinces. The mortality is, however, so far, low as compared with that of the same disease during the last few years, approximating 13 per cent only.

As regards the prefecture of Kanagawa, in which Yokohama is situated, dysentery is at present far more severe than, I think, it has ever been before, the number of cases being at least four times as many as at the corresponding period of last year's severe and general outbreak. Yokohama itself is fortunately comparatively free from the malady, an exemption which is no doubt to be credited to its exceptionally good water supply. The governor of the Ken, on the 10th instant, issued instructions to sanitary officials, with a circular of advice to the people, calling attention to the spread and importance of the epidemic, and

September 9, 1898

prescribing strict police and hygienic measures for its control, laying special stress on the importance of boiling all water used for drinking. But few cases are reported from Kobe and its neighborhood, and none at all from Nagasaki.

I am, sir, very respectfully, your obedient servant,

STUART ELDREDGE, M. D.,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

Report of infectious disease in Japan from July 28 to August 16, 1898.

a No report.

PUERTO RICO.

United States troops not exposed to yellow fever.

The following copy of a telegram from Ponce was furnished the Bureau by Surgeon-General Sternberg, United States Army:

PONCE, September 1, 1898.

STERNBERG, Washington: There is no yellow fever in any part occupied by our troops. They have been inspected carefully.

WOODBURY,

Acting Chief Surgeon of the Army in the Field.

STATISTICAL REPORTS.

BAHAMAS—*Dunmore Town.*—Two weeks ended August 22, 1898. Estimated population, 1,472. No deaths and no contagious diseases reported.
